

COVER HARASSMENT CONFERENCE 2014

RAUNI-LEENA LUUKANEN KILDE

Former acting director of ENVIRONMENTAL Health and Health education of National Institute of Health of Finland in Helsinki and government of Finland representative in World Health Organization in Geneva.

Bright Light on Black Shadows, man is a mind, not a body. Russian general Alexei Savin Stated in Pravda that a human being is an information and electrical system, which can be influenced from outside. First attempts to influence human behavior, attitudes and feelings were attempted already 1874.

Today microchips of the size of 2 micro-milimeter are inserted into general population without their consent for their total control. Medical personnel working in the field get different information of vaccine content than researchers and "insiders" who follow UN Agenda 21 for depopulation by 85% of the world population with various mean.

Never do medical schools teach the differential diagnose of MK and the fact that this military technology exists and has been used for over half a century in total secrecy. In military mind control is listed as a "nonlethal" weapon but in psychiatry the whole subject is tabu and considered as sign of mental illness to cover up unethical research on humans.

He who controls the minds of men controls the world!

CHAPTER XVIII: OVERVIEW OF HARASSMENT METHODS BY COINTELPRO GLADIO, COVERT COMMUNITY RECRUITS AND STAY BEHIND.

I. GENERAL

Operations in general are of the "active surveillance" type. Passive surveillance is watching a target covertly, to obtain information about the target. Active surveillance can include information gathering, but it includes the agent making the target aware they are under surveillance. Beyond active surveillance, agents perform acts to keep the target uncomfortable, around the clock. Although operations are silently approved of, and covered for by the official justice system is seen by citizens who do not have a strong sense of right and wrong as criminal in nature. Agents must take great care that each and every act of punishment is DENIABLE. This means that the target should complain to police, any other officials, or friends, neighbours, family members, or doctors the nature of punishment must be seen as the target's "overactive imagination" or better yet, an indication the target is mentally ill, has worked for years to recruit the medical establishment in helping maintain deniability, and today, most targets immediately labelled as mentally ill and often forced on to anti psychotic medication when they complain. But their agents must still do their part skilfully perform acts of punishment, so almost anyone the target complains to will deny a crime against the target has taken place.

As an agent, you will be trained in how to do this.

It has been blessed with advanced technology which enables heavy punishment at times the target is in their home, silently, through walls, and this is very deniable. Agents must pass their initial training and demonstrate a high level of commitment to maintain community safety, and the ability to operate deniable, before they will be considered for advanced electronic punishment training. Electronic punishment training is beyond the scope of this manual.

The organization is very fortunate in that we have been able to recruit top specialists to back up field operations people. Psychologists are the key to find ways to maximize feelings of stress and hopelessness in the target, and degrading the target's health, from many individually "minor" invasive punishment acts. Technicians in all fields -telecommunications, electric power, building electrical and alarm systems, and utility employees in all fields use their positions to inflict many absolutely "normal-looking" problems to targets on an ongoing basis. And of course, the services of many skilled locksmiths are invaluable in this. As a community-based agent (CBA) you will have the privilege of working with a team capable of delivering better "justice" than the official system.

2. SURVEILLANCE

Surveillance is the foundation of all operations. Both community based agent (CBA) visual surveillance and advanced electronic surveillance are used. This chapter will cover only local agent visual surveillance. Your local lead agent will schedule surveillance watches for each target in that community. Every target will have at least one CBA watching them all times, even while home and asleep. Each CBA surveillance team will be given a cellphone number for reporting target actions and movement to the local

Control Center. Actions to be reported include, but are not limited to: Target turns lights on to start the day

Target uses toilet or shower

Target exits residence

Target drives away

Target arrives at work, or

Target shops or visit any other establishment or location

Target arrives home

Target eats meal, home or restaurant

Target engages in sexual activity

Target turns light off at the end of day

Target turns light on in the middle of night

Target travels out of town

Some of these observations will be performed by the Electronic Corps (EC), but CBAs should attempt to make and report as many detailed observations of target activity as possible. The reason such detail is necessary is that the punishment phase of active surveillance requires that supervisors customize each punishment action to match the personality of target, and the need to make each punishment action appear to be "life's normal breaks".

One important punishment function of surveillance is to sensitize the target. Targets are never told they are under surveillance or being punished. Instead, close, active surveillance and other activities, happening far too frequently to be written off as "life's normal breaks", will eventually cause the target to realize they are under surveillance and punishment.

As a community-based agent, you will be given specific instructions on exactly when, where and how to carry out punishment actions. As long as you carry out punishment instructions exactly as given, there is no way the target will be believed if they complain, and you will not be exposed to risk of action by law enforcement.

How well the punishment actions work depends on how accurate and complete your reports are in many situations, center acquires access to properties or apartments immediately next to target's homes or apartments. Because EC has through wall surveillance and punishment equipment, they will be reporting target activity along with community based agents. In a typical setup, CBAS may be posted in a parked car where the target's home or apartment can be observed overnight, for example.

In this setup, the CBA in the car may be instructed to call, using walkie-talkie style cell phone, another CBA (or team) waiting or patrolling by car nearby to follow the target, or, you may be assigned to follow the target yourself. You will receive instructions from your local center as to following the target. Targets in transit may be either covertly or visibly followed. When in doubt, hang back a bit, and contact the center for instructions, as targets in transit can present many unanticipated situations. The center will always have the target's position monitored, so if a target gives the CBA the slip, it will assign other appropriate community based agents to pick up the target at the earliest opportunity. Be sure to notify immediately if you lose the target.

When applying the visible following of a target, making the target uncomfortable because of your presence, you will be given instructions as to when to break off the following. Another CBA or CBA team may pick up the visible following, but once you have broken away, they advise that you are clear and ready for the next assignment.

3. INTERCEPTS

Intercepts are where community-based agents (CBAs) will appear to "just coincidentally" cross paths, on foot, with the target. Once the target has been sensitized to the point of realizing they are under surveillance and punishment, they will recognize, and be made appropriately uncomfortable by, the simple act of multiple CBAs "just happening to" cross path with them.

Your local Control Center will instruct you as to how you will be cued to perform an intercept. Often you will have an on-site supervisor (OSS) position you, and give you hand signals as to when to start your movement to intercept the target. Because targets moving about aren't always totally predictable, the success of CBA intercepts depends heavily on the Electronic Corps who have means of monitoring the exact whereabouts of every target, and through computer programs, predict exactly when and where a target will be as they move about the community. Your local OSS has a special means of receiving instant, silent instructions from the Center.

1. Intercepting CBAs may be asked to perform one of the following forms of intercept:
 2. Simple path crossing, requiring the target to take evasive action to avoid collision; multiple CBAs sometimes perform this several times during a single outing by the target.
On foot, walking for an extended period in the opposite side of a street from walking target.
 3. Arrival at a place known to be a favourite of the target, and simply occupying that place just as the target is about to arrive (restaurants, parks, public facility seating, even bus seats are examples); sometimes just "hanging out" in such a location at times and places where people don't ordinarily do that.
 4. Smoking, coin-jingling, whistling, or toe tapping near the target at a location where the target is known to need to stand, as to wait for a bus, or standing right behind a target at a water fountain.
 5. A group, as many as a dozen CBAs, may be assigned to arrive at a store just ahead of a target, and form a queue ahead of the target, spending time buying lottery tickets, to delay the target is very tired and eager to get home after work, for example, or in a hurry.
 6. Community-based agents may be assigned to leave a next door home or apartment exactly the same time as the target, repeatedly. Alternatively, a CBA may intercept the target a short way before home and arrive at exactly the same time as the target.

While these may seem like trivial acts, keep in mind that the target will have these "trivial" things happen every single day, and repeated intercepts like these will force the target to always watch for such acts, essentially ensuring the target never "has a nice day". This is the goal, to ensure targets punishment. Similar intercept operations are performed with vehicles. The Center can schedule these every day the target commutes, and both to and from work. Vehicle intercepts are particularly effective when the target sees the same vehicle in an intercept convoy both in the morning and in the evening commute (Because vehicle intercepts can be dangerous, CBAs assigned to vehicle intercept duty must successfully complete a special training course prior to actual assignment.) Here are some examples of vehicle intercepts a community-based agent (CBA) can expect to be assigned:

-Parking so as to block a target's access to their vehicle, e.g. so close the door(s) can't be opened, and then "disappearing". Parking so as to prevent a target's leaving a parking area, and then disappearing-Parking commercial vehicles often, near target's home with something unusual about these

vehicles, such as there is no need for that trade, or, just unmarked white vans to make the target think the van is there conduct surveillance.

-Simple following, or leading, a short distance, but every day. Doing this, both during target commutes and then other times makes the target very uncomfortable.

-Passing a side street stop sign, then stopping an uncomfortable distance into oncoming traffic just as target is about to arrive at the side street, causing the target to have to slam on the brakes (this requires Control Center assistance and prompting by walkie-talkie style cell phone).

-For a CBA vehicle convoy, boxing in the target during a commute, forcing the target to travel at a slower speed than the target wants to travel. In some locations, the Center will supply special license plates to CBA vehicles with short words which have special meaning to the target.

-For a CBA vehicle convoy, and where the target is at a location (and time) where traffic is normally very sparse, cause heavy traffic, forcing the target to notice.

The ultimate vehicle intercept is the staged accident. This can be dangerous and is only assigned to very senior agents. However, it is possible to stage an accident so only the target knows it was staged. This is an excellent means of punishment where a target has committed a serious offense specifically against secret services by revealing their criminality to the public. Generally, staged accidents are done in jurisdictions where police strongly support the operations, so that the CBA driver is protected.

4. PHYSICAL SABOTAGE

Physical sabotage is an especially effective form of punishment when it is carefully limited to low value items, below the value where police will take the report seriously. For example, burning a target's house down, or even stealing an expensive appliance, would bring official investigators into the picture, so that is not done.

Sabotage producing extreme safety hazards is generally not suitable for operations, because of the potential for bringing official investigators to an accident scene. So while damaging the brake system of a target's vehicle is not allowed for community-based agents (CBAs), draining some of the oil, transmission fluid or radiator antifreeze is allowed, but not all of it. The goal is to make it look as if the target is negligent in maintaining fluid levels, and generally not causing a catastrophic failure that non-targets might see as sabotage.

It is very important to apply punishment by way of a large number of small value sabotage acts, because that makes it look like the target is forgetful, exaggerating, or in some cases even delusional, if they complain about many cases of small value damage, or in some cases even delusional, if they complain about many cases of small value damage. The target's associates will simply refuse to believe that anyone but the target is responsible. Sabotage is very important in that it lets the target know they are totally helpless to stop it, and can't even complain about it effectively without appearing mentally ill. Organization very fortunate in that some people, hearing about sabotage from a target did the sabotage themselves, "to get attention".

Sabotage is applied at the target's home, workplace, and on their vehicle. This requires the assistance of locksmiths and alarm technicians. Your local Control Center will supply this help, and will bring specialists in from a distance in the case of rural areas.

Here are some examples of sabotage a community-based agent (CBA) may be assigned to carry out:

- Entering a vehicle, or home, and changing control and radio settings.
- Replacing window washer fluid with water, possibly destroying the system in winter.
- Scratching the paint on the target's vehicle, scratching furniture & valuables.
- Tire sabotage, from removing some air right, up to slashing a sidewall if authorized by center. -Simulating a break in electric window heater strips.
- Cutting off the 4-way flasher button.
- Removing substantial amounts of oil, transmission fluid or antifreeze but not enough to cause catastrophic failure.
- Moving things around inside the vehicle to show the target someone got in.
- Unlocking the vehicle and leaving it unlocked, possibly even with door open.
- Small cuts to car's upholstery.
- Unlocking the target's front or back door and leaving it ajar while the target is away, even at midnight at New Year for Y2 hour.
- Moving furniture or carpets around fairly frequently to show the target someone was there.
- Stealing low value items, especially items like scissors which can be easily misplaced, keeping them until the target replaces the item, then return the missing item, often in a place the target checked.
- Stealing important personal papers, especially those which will cost money to replace
- Stealing irreplaceable photographs.
- While target is at work, remove mail from their box and toss it around. Repeatedly making wall pictures crooked.
- Setting clocks to the wrong time.
- Repeatedly dumping consumable supplies (e.g. coffee) to make the target think they are no longer capable of managing their supplies well.
- Starting small rips in new clothing, which are widened on repeated visits.
- Ripping crotches out of the target's underwear, or stealing finest underwear, swim suites etc. -Replacing clothing with similar items which are too small for the target, like for children what target does not have.
- Ironing inside button flaps over, making buttoning the shirt or top difficult.
- Carefully working the tip of a knife through seams in any air mattress or cushion the target may own, including replacements, on a daily basis.
- Breaking zippers in clothes and bags, perhaps by pulling out a tooth or two.
- Shoving a knife through the soles of waterproof boots.
- At work, removing screws from the target's office chair, or at home dinner table leaving only one screw of four, left to tilt the table with china.
- At work, damaging or destroying (if not extremely obvious) a target's work from a previous day; for example, if a target fixes computer, the next day, the computer is broken again possibly worse.
- At work, replacing current copies of computer files with an older copy-particularly serious if target is a

computer programmer.

-At work, where some employees are or can be recruited to be community-based agents, set up "mistaken deliveries" of heavy goods which block the target's office.

-At work, if the target is responsible for parts of the operation which can be sabotaged, do so repeatedly just as the target starts eating lunch, or is about to leave for home.

-At work where the target is responsible for materials can't be locked up, sabotage or with special permission from the Control Center steal the material.

Thefts have to be carefully considered and authorized by your local Center, unless you have authorization, do not steal. One particularly effective type of theft is to remove small value, but often used items from the target's premises. Once the target has been observed purchasing a replacement, the item is returned. This not only causes the target to question their own sanity, it also forces the target to spend money uselessly, and impose a feeling of total helplessness on the target.

5. SABOTAGING THE TARGET'S REPUTATION

Sabotaging the target's reputation and all that goes with it, such as ability to earn a living, business and personal relationships — is a very special operations category. Newer community-based agents will not be assigned to "engineer" the method, but will assist in passing "rumours", which are the main means of destroying a target's public image.

"Rumours" consist mainly of lies. However, in order to secure cooperation of specific members of the community to participate in the punishment phase, additional information keyed to appeal to the patriotic or community service sense of such community members may be used as well. As mentioned earlier, the organization has many top psychologists and psychiatrists on permanent staff at headquarters, and some in larger population centers. It is their responsibility to design the campaign to destroy the target's reputation.

These people listed below can be approached and given information which will cause them to make the target's association with them uncomfortable, or break off all contact with the target:

-Business contacts.

-Supervisors.

-Co-workers.

-Causal social contacts, such as clubs a target may be a member of, or a group who frequent a bar where the target is a patron. -Friends.

-Local fraternal organizations - they are motivated by the public service, and are an excellent source of assistance in keeping the target under surveillance, and participating in the punishment phase as well.

-Store staffs at places the target shops.

-Target's landlord.

-Target's neighbours.

-Tradesmen who are likely to service the target's home, car, or business.

-Bus drivers on the target's route.

- Local children.
- City employees, including emergency medical technicians, ambulances.
- Homeless shelter staff and residents where applicable.
- Family members (surprisingly, many are ready to believe negative information).
- Especially, personnel at places the target applies for work.

How intensely this is governed mainly by the need to prevent the target from that negative rumors are being spread. The goal is to keep negative information covertly flowing into community, in such a way that those receiving the information aren't likely to tell the target. One might think that friends and family members would instantly notify the target and side with the target. Fortunately, experience shows that co-opting friends and family is surprisingly easy, once they are informed about the target's criminal record. The Headquarters staff, have developed techniques which by and large prevent that, but those techniques are beyond the scope of this manual. Suffice to say that it is possible to apply "incentives" which cause even people closest to the target to cooperate. These incentives are applied by specialist from our organization at higher than local level. For the community level CBA, the work of sabotaging the reputation of the target takes the form of simply carrying out instructions from your Control Center as to what you say to whom, how, and when.

6. DISCREDITING TARGETS

While the powerful silent support of operations by the justice and psychiatric systems has been sufficient to prevent target from informing the public, the area of discrediting targets is an ongoing activity. Like sabotaging the target's reputation, discrediting their public statements, web sites, media appearances, letters to the editor and the like are done under the supervision of psychologists and psychiatrists on their staff. If a community-based agent (CBA) has a good track record of intelligently carrying out assignments, and has access to a computer, the CBA may apply to the local Control Center for assignment to discredit work. Excellent communications skills are required. Some of the activities CBAs carry out under supervision are:

- Monitoring message boards, Wogs, and open media like Indy media for target posts.

This is normally done in special shifts and under scheduling and control at a higher level than your local CC. This monitoring is assisted by blog scanning software which will detect and instantly flag posts relating to activities. The CBA doing this work will immediately reply with comments like "Someone isn't taking their medication" or "<target name> has provided absolutely no evidence". The CBA will then report the post to higher level supervisors for possibly more detailed responses. -Monitoring newspapers in your area for letters to the editor regarding activities. Most editors and many reporters have been recruited and are willing to assist in keeping the important work of monitoring and neutralizing quiet, but once in a while, a letter to the editor will slip through. In this case, comments like "Someone isn't taking their medication" are not an appropriate response. Transcribe and forward such a letter to the editor to the supervisor, along with your proposed response. The supervisor may edit your response, and will assist in ensuring your response is printed.

- Your supervisor will have staff monitoring upcoming talk show appearances by targets. While most talk show hosts, even those somewhat sympathetic to targets, have received discrediting information and often will not host targets, some targets do manage to get on the air. In this case, your supervisor will assign you to call into the show, and will instruct you as to appropriate things to say, such as rebutting the target's claims, pretending to be a target calling in and making "wacko" statements such as "UFOs are

harassing me", or pulling the discussion away from real activities and to something like "media mind control".

-Agents who have excellent persuasive communications skills can be assigned, with careful coaching and preparation from supervisors, to pretend to be a target and get on talk shows known to air targets as the guest. These opportunities are great ways to discredit targets by talking about UFOs, things like black helicopters following you, foil beanies, satellites "parked" just above your home, and perhaps events normally considered "paranormal" like seeing appear and disappear. These discrediting topics must be total surprise to the host, only mentioned after the show is in progress.

-CBA can "casually" describe the "odd behavior" exhibited by the target as a result of around the clock activities to the targets neighbors. The idea is to focus the neighbors' attention to the target's behavior, hinting that maybe the target is mentally ill. This is easy once the target has developed suspicion that "everyone is out to get him or her.

It is a special "honor" for CBAS to be chosen for target discreditation work.

7. TRADE-RELATED PUNISHMENT

This section will give some examples of ways community-based agents (CBAS) with specific trades or situations in the community can apply deniable punishment to targets:

-Underground utility crews, where the management has been recruited, schedule messy, noisy maintenance at the target's home (or business if the target runs a business). This can include having the street torn up for extended periods, or repeatedly. Funding for unneeded work is available from headquarters. Taxi drivers can delay arriving when called by the target, especially when going to the airport.

-Bus drivers have leeway, in nasty weather for example, to stop one stop away from awaiting target and wait there for perhaps 5 minutes, ostensibly to "get back on schedule". This can also cause a target to miss connections with the next bus or train. This is especially effective when the target, exposed to bad weather, can see the bus waiting up the street for no apparent reason, or not stopping at all at your bus stop.

-Repair trades people can keep "getting it wrong" necessitating many recalls, be late, be messy, over-bill the target, and even damage things which were OK. This is especially effective in the automobile repair trade.

-Medical lab technicians can substitute blood samples, or otherwise falsify results making the target appear to have absolutely no reason for their complaints.

- Police can frequently pull the target over for frivolous reasons.

-Telephone and cable TV technicians can re-route legitimate calls to the target's number in large numbers, and this will cause the target to get very angry with these totally innocent callers.

-Store staff where the target shop frequently can be instructed to remove items the target is known to need when a target is known to be coming Store management can stop ordering a target's favorite items.

-Restaurants and food delivery services can tell the target they are out of an item known to be a favorite of a target The key to successful punishment by trades people is that while the target is very likely to know they are being punished, these punishment acts must appear to the general public as "life's normal breaks".

8. TARGET'S HOME

Punishing the target at the target's is essential for effectiveness of secret service operations. If the target were punished in the community but was allowed sanctuary in their home, the creation of a "prison without walls" would not be complete. One of the very first things the Control Center (CC) will arrange is for homes or apartments adjacent to the target's home to be occupied by both community-based agents (CBAS) and members in the Electronic Operations manual. Because operations are carried out 24/7 in shifts, homes and apartments which are leased or owned by staff are not used as dwellings. The lease or deed will bear either an entirely false name, or the name of a senior staff member whose actual home will be at different location.

Some adjacent homes or apartments are occupied by neighbors of the target who have offered to cooperate in punishment of the target. The initial contact of neighbors to determine their willingness to cooperate is done by senior staff, and incentives to cooperate are often tendered. Here are some commonly used punishment activities which are carried out both by CBAs and cooperating neighbors of the target. Activities are rotated among the choices, but at least one of them is applied daily :

-Noise. Noise must be of a type which the general public deems "normal". Remember that the goal is to have the target aware they are being punished, but not be able to convince anyone else that is the case. Observe local noise curfews, but plenty of punishment can occur outside noise curfew times. The target must not have easy cause to involve law enforcement. Examples:

-Starting leaf blower, timed precisely when the target attempts to enjoy their yard, or when EC operators cue the CBA that the target is trying to nap.

-Loud music from neighboring home. This is an excellent action, as it is common. Time it so every time the target opens a window the music starts. The timing makes the point it is intentional punishment. EC operator can apply music in adjacent apartments with exceptionally power bass, directed at the target's unit.

-Frequent squealing of tires near target's home.

-In apartments, frequent drilling into a scrap of wood or masonry held against the target's wall, floors or ceiling as if "working". Alternatively, hammering. Especially effective when cued by -EC operators that the target is attempting to nap.

-Tossing golf or tennis balls against the target's home when the target is known to be trying to fall asleep. Ideal for cooperating neighbor children.

-Frequent use of sirens near target's home. Many emergency services employees have a-strong sense of community service and willingly cooperate in this, or by people posing as Jehovah's witnesses.

-Knocking on the door for frivolous/nonsensical/wrong address reason. Especially effective when the target is in bed or having a meal.

-Trash. Leave trash in the target's yard. Frequently, but CC staff will assist in scheduling this so that the target can't quite have a case on which law enforcement will act.

-Terrifying the target's pet. This requires entry while the target is away from home for an extended period and must be scheduled by CC. Electronic Corps (EC) operators can render a dog or cat passive for safe entry of the community-based agents, by electromagnetic beam.

-Wounding or killing the target's pet Rarely used, scheduled when the target has acted in a way so as to deserve special punishment, like divulging the name of a criminally acting secret agent.

-Killing domestic animals or wildlife and leaving them on the target's doorstep. Scheduled when the target has acted in a way so as to deserve special punishment.

-Where the target owns substantial land, noxious activities can be arranged and built for next to the property. In one case, a dump, an auto race track, and a prison were built adjacent to a target who owned a large farm in an area of natural beauty. While this is rare, it does illustrate commitment to delivering punishment to those "deserving" of it.

-Cooperating police departments can visibly watch the target's home. Possibly being parked in front of the home when the target returns, repeatedly.

Police officers who refuse to take complaint of harassment and sabotage of the target, who they label "disturbed" - really are NOT allowed to make diagnoses as medical doctors only can do -but may get a raise - price- for their unlawfulness afterward. Police follow orders by e.g. Stay behind, Secret military led organization, created by CIA after WW II in NATO countries. They give orders in secrecy to Police, media, legal system and judges etc. Thus being above parliaments and governments as demonstrated e.g. in Norway when year 1957 chief of Stay behind Sven Ollestad gave the security code of Norway to M16 in UK acting on his own! "We have to trust our allies" he had said. Today, the security code of Norway is kept in Wales. Originally Stay behind was created with good intentions to fight communism. Today it is out of control, and a new, much bigger Stay behind 2 is active in Norway. Stay behind logo resembles NATO logo.

In Italy Stay behind was called Gladio 2, dealing with terrorism secretly in Western Europe. It was eg responsible for kidnapping and killing Prime Minister Aldo Moro 1978 where the blame was given to Red Brigade. Today enemies are communists and NATO opposition. 22.11.1990 EU forbade operation Gladio, but although Norway follows most EU decisions, this one is omitted. Italy and Belgium had terror actions by Stay behind, and when the organizations were stopped to exist also terror actions stopped. In Norway Stay behind is called E14. What was its role in Norway's terror actions, if any? Some have tried to get control of Norwegian stay behind already years ago. Who are the back men giving orders to those 'officially' in charge.

European Parliament resolution on Gladio

Wiki source on Answers. Com;

On November 22, 1990, the European Parliament passed resolution on Operation Gladio. Joint resolution replacing B3-2021, 2058, 2068, 2087/90

A having regard to the revelation by several European governments of the existence for 40 years of a clandestine parallel intelligence and armed operations organization in several Member States of the community.

B. whereas for over 40 years this organization has escaped all democratic controls and has been run by the secret services of the states concerned in collaboration with NATO,

C. fearing the danger that such clandestine network may have interfered illegally in the internal political affairs of Member States or may still do so,

D. where in certain Member States military secret services (or uncontrolled branches thereof) were involved in serious cases of terrorism and crime as evidenced by, various judicial inquiries

E. whereas these organizations operated and continue to operate completely outside the law since they are not subject to any parliamentary control and frequently those holding the highest government and constitutional posts are kept in the dark as to these matters,

F. whereas the various "Gladio" organizations have at their disposal independent arsenals and military resources which give them an unknown strike potential, thereby jeopardizing the democratic structures of the countries in which they are operating or have been operating.

G. greatly concerned at the existence of decision-making and operational bodies which are not subject to any form of democratic control and are of a completely clandestine nature a time when greater Community cooperation in the field of security is a constant subject of discussion.

1. Condemns the clandestine creation of manipulative and operational networks and calls for full investigation into the nature, structure, aims and all other aspects of these clandestine organizations or any splinter group, their use of illegal interference in the internal political affairs of the countries concerned, the problem of terrorism in Europe and the possible collusion of the secret services of Member States or third countries,

2. Protests vigorously at the assumption by certain US military personnel at SHAPE and in NATO of the right to encourage the establishment in Europe of a clandestine intelligence and operation network.

3. Calls on the governments of the Member States to dismantle all clandestine military and paramilitary networks,

4. Calls on the judiciaries of countries in which the presence of such military organizations has been ascertained to elucidate fully their composition and modus operandi and to clarify any action they may have taken to destabilize the democratic structure of the Member States;

5. Request all the Member States to take the necessary measures, if necessary by establishing parliamentary committees of inquiry, to draw up a complete list of organizations active in this field, and at the same time monitor their links with the respective state intelligence services and their links, if any, with terrorists action groups and/or other illegal practices;

6. Calls on the Council of Ministers to provide full information on the activities of these secret intelligence and operational services,

7. Calls on its competent committee to consider holding a hearing in order to clarify the role and impact of the "Gladio" organization and any similar bodies, 8. Instructs its President to forward this resolution to the Commission, the Council, the Secretary-General of NATO, the governments of the Member States and the United States Government".

9. OTHER TACTICS

There are other tactics which are not strictly part of the categories discussed so far:

-IMPORTANT: Community-based agents (CBAs) are strictly forbidden from adding anyone to the list of targets. Target selection is done by senior Control Center (CC) staff or higher levels.

Punishment of people who side with and help the target. Friends, family members, and citizens who do not place a high value on community sometimes help targets. In these very specific cases, CC-authorized punishment in the form of individual acts against them is appropriate. The system can arrange for these target sympathizers to be found guilty of crimes, or liable for civil actions, for example. This is important for maintenance of the system.

-Target bank accounts can be disrupted in ways which do not give the target cause to involve law enforcement. Examples: target account can be changed to a "youth account", or, an overdraft protection feature can be disabled, without notifying the target, by cooperating bank employees. Or they can change interest rates paid from one account to another, or simply steal money from the account. It is called action

of "international bank ring" and usually at first the sums are around 50-100 \$ which are taken when the target pays smaller bills.-Money never is transferred to the journal subscription or membership in a certain club like "opposition to bank with help of cooperating employers. I have experienced this government surveillance". Money simply "disappears" from the myself several times. Bank accounts are "hacked" for the payment and a new bill arrives for the already paid bill by the target, and the receipt of payment is stolen. There is cooperation with military intelligence, Stay behind, NATO, and foreign intelligence agencies also against their own population. So called secret silent war going on in all secrecy.
